contemporary telemedicine enable healthcare professionals to provide heart healthcare to patients in need, and these healthcare professionals are patients themselves. To evaluate the usability of the HeartPortal, a participatory design study was conducted. Method: A questionnaire survey was conducted among healthcare professionals to determine the usability of the HeartPortal. Results: The usability findings indicated that the HeartPortal was easy to navigate and understand, and that the graphs and information were relevant to the disease. Conclusion: The HeartPortal is a viable solution for improving heart health outcomes.
