**JUNE 15-18, 2008  
LUBLIN (POLAND)**

## ORGANIZERS

Medical University of Lublin, Faculty of Pharmacy  
Chair and Dept. of Pharmacognosy with Medicinal Plant Unit

### SYMPOSIUM CHAIRMAN

K. Głowniak (Lublin, Poland)

### In co-operation with:

The Committee of Therapy and Drug Research of the Polish Academy of Sciences  
The Polish Society of Phytochemistry, The Phytochemical Society of Europe

### Patronage of the Symposium

Prof. Dr. Andrzej Książek – Rector of Medical University of Lublin

### HONORARY COMMITTEE

President – Ewa Kopacz – Minister of Health (Republic of Poland)  
Prof. Dr. Wojciech Kostowski – President of VI<sup>th</sup> Division of Medical Sciences  
of the Polish Academy of Sciences  
Prof. Dr. Mirosława Furmanowa – President of The Committee on Therapy and Drug  
Research of the Polish Academy of Sciences  
Zofia Ulz – Main Pharmaceutical Inspector  
HE Thakur Phanit – Ambassador of Kingdom of Thailand  
Genowefa Tokarska – Voivode of Lublin Province  
Krzysztof Grabczuk – Marshal of Lubelskie Region  
Dr. Adam Wasilewski – Mayor of the City of Lublin  
Prof. Dr. Maciej Latański – President of the Scientific Council of Polish Ministry of Health  
Prof. Dr. Jan Gliński – President of the Lublin Branch of the Polish Academy of Sciences  
Prof. Dr. Janusz Pluta – President of the Polish Pharmaceutical Association

### INTERNATIONAL SCIENTIFIC COMMITTEE

Y. Asakawa (Tokushima, Japan)	T. Kowalska (Katowice, Poland)
K.H.C. Baser (Eskisehir, Turkey)	K.H. Kubeczka (Margetshoechheim, Germany)
R. Bauer (Graz, Austria)	T.J. Mabry (Austin, USA)
C. Bicchi (Turin, Italy)	D.G. Nagle (Mississippi, USA)
G.K. Bonn (Innsbruck, Austria)	J. Reichling (Heidelberg, Germany)
I. Chinou (Athenes, Greece)	A.L. Skaltsounis (Athenes, Greece)
W. Cisowski (Gdańsk, Poland)	E. Soczewiński (Lublin, Poland)
H. Frank (Bayreuth, Germany)	B.N. Timmermann (Lawrence, USA)
D.A. Guo (Beijing, China)	A. Vlietinck (Antwerp, Belgium)
Y.V. Heyden (Brussels, Belgium)	R. Verpoorte (Leiden, Netherlands)
K. Hostettmann (Geneve, Switzerland)	H. Wagner (Munich, Germany)
R. Kaliszan (Gdańsk, Poland)	M. Waksmundzka-Hajnos (Lublin, Poland)
J. Karlsen (Oslo, Norway)	T. Wolski (Lublin, Poland)
B. Kopp (Vienna, Austria)	J.K. Zjawiony (Mississippi, USA)

### LOCAL ORGANIZING COMMITTEE

T. Baj,	A. Józefczyk	M. Kwietniewski	E. Majcher	Ł. Świątek
M. Bartnik	M. Kozyra	A. Ludwiczuk	T. Mroczek	J. Widelski
M. Hajnos	S. Kwiatkowski	A. Machalska	K. Skalicka-Woźniak	G. Zgórk

Extracts of elderflowers (*Sambucus nigra*) are in the traditional medicine primarily used for treating colds and as a diuretic. The extracts are also consumed as soft drinks, and it is believed that the health-promoting effects of the elderflowers are due to their antiviral and antioxidant properties. Areas, in which elderflowers have been suggested to have beneficial effects, are in lipid lowering, diabetes, and protection against infections such as HIV and herpes simplex. In a screening of plant extracts for potential anti-diabetic effects, extracts of elderflowers have been found to contain compounds with activities similar to those of partial peroxisome proliferator-activated receptor (PPAR)  $\gamma$  agonists. PPAR $\gamma$  agonists are used in the clinical treatment of type 2 diabetes but are associated with severe side effects and hence, alternatives are needed. To identify the potential bioactive compounds of the elderflower extract a bioassay-guided fractionation was carried out. A large scale methanol extract of elderflowers was made and fractionated using reversed phase flash chromatography. This provided a very good separation of both the phenolic acids and flavonoids in the extract and only a single step using semi-preparative HPLC was needed for final isolation of the bioactive compounds. Major metabolites such as 5-*O*-caffeoylquinic acid, quercetin-3-*O*-rutinoside, and 1,5-di-*O*-caffeoylquinic acid were obtained in pure form by the first chromatographic step. Bioactivity was assessed using a PPAR $\gamma$  transactivation assay. The minor metabolites linoleic acid,  $\alpha$ -linolenic acid, and the flavanone naringenin were found to be able to activate PPAR $\gamma$ , whereas the major metabolites of elderflowers were found not to be active. The content of the active metabolites as well as the other phenolics was shown to vary within different varieties of elderflowers. So the results of the present study clearly shows that it is very important to identify elder varieties with an optimal metabolite profile in order to produce effective elderflower foods and/or herbal products for the treatment/prevention of type 2 diabetes.
