

*The Nordic Baltic 2018 Food & Nutrition Initiative on how to take advantage of digitization and research infrastructure thinking*

# How to build a food alliance & consensus around the idea of a Research Infrastructure? Experiences from Denmark

Bent Egberg Mikkelsen, AAU - CPH

**Abstract:** Research Infrastructures is an important component of European and national research policies. But do we need them for Food, Nutrition & Health? This paper reports on experiences from recent years in trying to build an alliance in Denmark around the idea of a research infrastructure around Food, Nutrition & Health. It reports on the alliance building efforts between universities and between academia and non academic partners. The report feeds into the Nordic Baltic 2018 Food & Nutrition Initiative on how to take advantage of digitization and research infrastructure thinking.

**A Research Infrastructure for Food, Nutrition & Health - in my country, in Europe or both?**

**Department of Nutrition, University of Iceland**

May 11, 2018

# Be prepared to be questioned

- Very few people knows what is a Research Infrastructure
- So have your examples lined up
- And get ready for some techplomacy

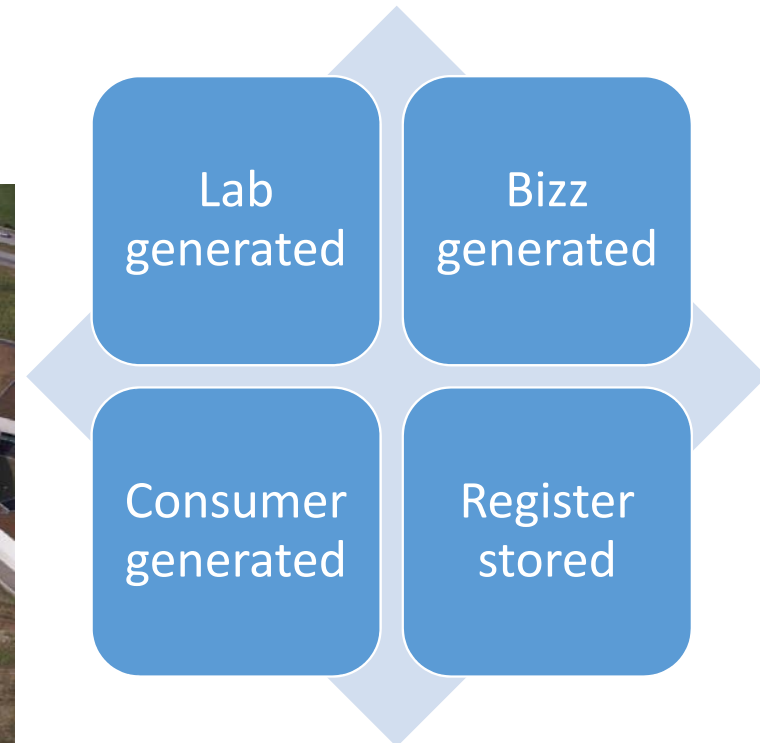

# Food Research Infrastructures

## 2 dimensions. Hard & Soft

**Hard part: labs, devices, machines etc**

**Soft part: multi source data**

# Advice 1: Create YOUR narrative

In DK its all about connecting FoodLabs

**Danish National Node for smart use of data & labs in Food Nutrition & Health**

The Danish National Node for smart use of data & labs in Food Nutrition & Health is governed by a board. Members are Bent Egberg Mikkelsen, Professor Aarhus University, Head of Department Michelle Williams, Aarhus University, CEO, Leif Nielsen, Confederation of Danish Food Industries, Morten Andersen Linnet, Director of Research Policy, Danish Agriculture and Food Council. Niels Götke, Head of Division, Agency for Science and Higher Education. Members from DTU and KU will be invited.

Most people can see the idea of connecting labs  
And to connect to the international

- Behavioral nutrition Lab
- Sensory lab
- Chemical lab
- Product lab

# Keep roadmaps apart

- A national roadmap. Runs -2020. Then a new one
- In Denmark its called the FoodHay
- Getting on the road map is not the same as getting money
- Idea: get on the road map. Then annual envelopes can be granted
- The international road map ESFRI requires an alliance between national nodes
- Good question is then: whats the relation between node and "foodhay"
- And dont forget the "approval"

# A slow train coming

- Its not a speed train
- But you need to get ready on the station
- Hop on board
- Or stay put
- It gonna run in any case

Recent policy papers says the same

*The food sector compared to travel tech,  
health tech and fintech are lacking behind in  
terms of taking advantage of "the digital"*

# Why trace consumption patterns the digital way – what we know from Richfields

Some stakeholder views on Big data food data analytic and “food & the digital”

*“We have so many data we **don't know what to do with them** 😊”*

Chief data analyst, Major Danish Retailer

*“Something is rotten in the state of the retail sector. **Its changing but we don't know how.** What we know is that its digitally driven”*

Major Danish Market Intelligence Bureau with inspiration from Shakespeare

*“Why don't you do a **couple of use cases**”*

devarsvindler meget sværere. Eller en blockchain  
vor alle led i forsyningskæden deler data. Hvor  
ed et tryk på tastaturet. Eller et virtuelt supermarke  
te forbrugere – blot ved invitere dem ind i det virtuelle

# Use case 1: Know now or in 5 years? **Get realtime answers on food intake**

- 7 day food record
- High drop out rate
- Primarily resource full respondents
- Labor intensive data cleaning
- Five years before reporting
- Costumer generated
- Card based (loyalty, credit etc)
- Directly interface to TradeSync
- Realtime sourced
- Based on DonateYourData/sharing economy

*"Your idea of a digital data platform is the future but **you needa' come back in 2 years.**"*, Deputy director, DK Government Food Agency

# How to prepare

- How to create an alliance?
- And become a national node?
- Start talking

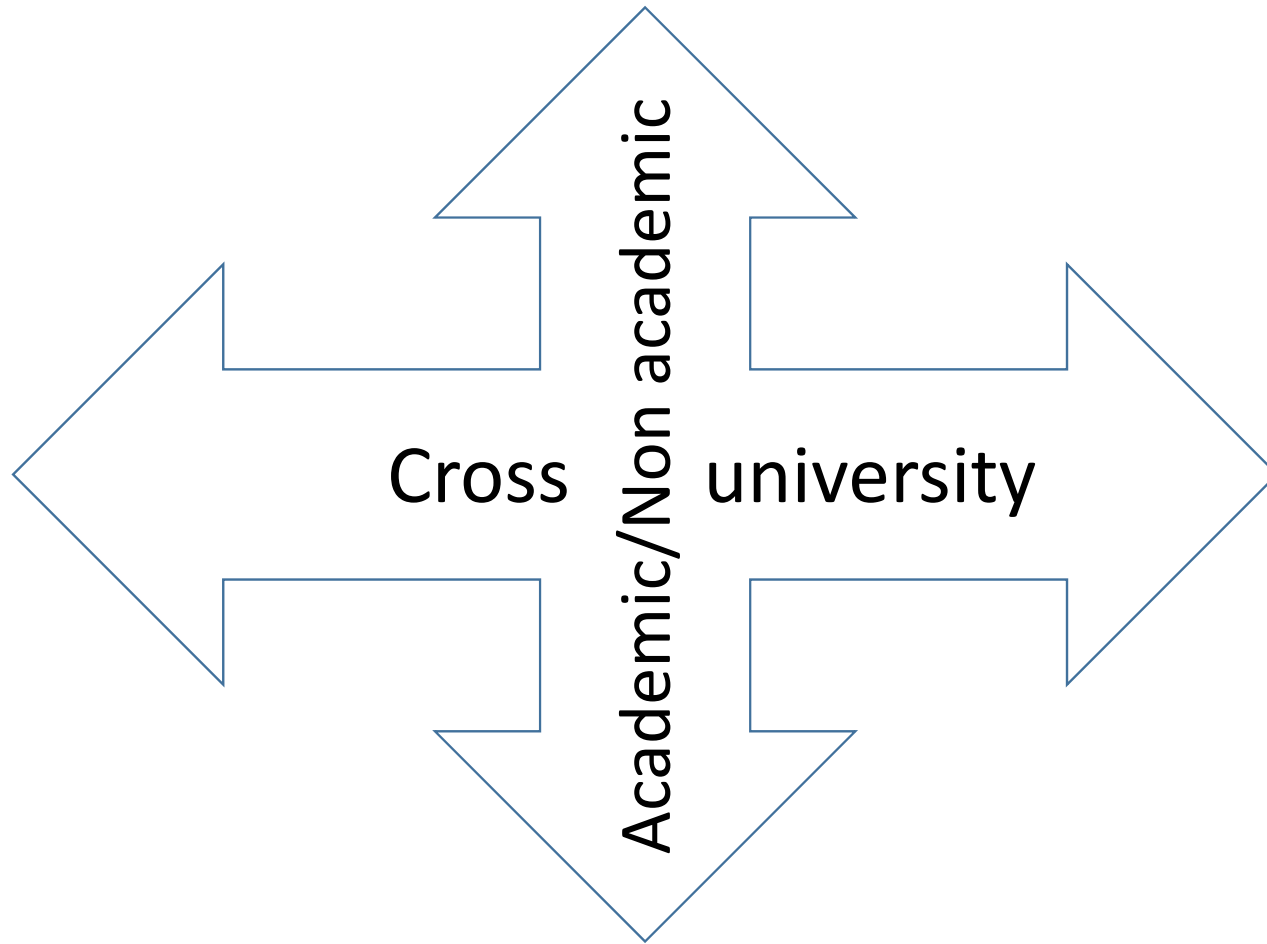

# Non academic

- Confederation of Danish Food industries (Fødevareindustrien)
- Food Agri Council (Landbryg & Fødevarer)
- Food Agency/Food Ministry
- Danish Trade (Dansk Erhverv)
- Horesta
- Danish Dietetic Assoc (Kostforbundet)

# Two dimensions of alliance building

# How to explain the RI idea?

## Negative and positive

### • **Is not**

- A single big source data source
- A turn key business
- A profit undertaking
- A static phenomena
- A single country activity
- A competitor to traditional market intelligence

### **Is**

A multiple big source data platform

A European activity

A patchwork of different sources

A business

A data democracy

A dynamic phenomena

An infrastructure for research

.... and hopefully something more

# Take home

Step	Do what	Why?	Remarks
1	Study the ESFRI and the parallel national RI agenda	They are governing all decisions and grants	Don't let the paperload and the complexity scare you
2	Attach to the "food and the digital" agenda	AI, IoT and BCT is nonsense to most people in the sector	Consider develop and test use cases along with industry such as Food Hackathons etc
3	Read and cite recent EU and national policy papers and strategies	Be surprised how many of them speak about digitization, AI, BCT, IoT etc	Note how few food companies have experiences here
4	Start working with Science ministry	They prioritise RI grants both EU wise and nationally	In Sweden Vetenskapsrådet. Use the Danish and Dutch experiences where relevant
5	Emphasize that RI has both a soft side ("the Big data") as well as a hard side ("the labs" and the "small sensors")	The digital agenda can create growth also in the ICT industry	"Big science" RI's as ESS and Max IV are good examples of "hard" mode RI's
6	Develop "techplomacy" among actors in food system	Few people know what is a Research Infrastructure	Spend time on "relations management by coffee drinking"
7	Take advantage of the fact the food sector is lacking behind in terms of digitization	Point is that private sector can benefit if food science take the lead in digitization	Most food companies organisations know that "something digital" is going on. Only they understand completely what
8	Work on alignment between food universities	Most people will understand that future science is too complex for uni's NOT to cooperate	Most people can understand the "projectitis" fever tends to result in lack of "permanency"
9	Create consensus among other actors of food system: industry, retail and foodservice	The food sector KNOWs that its an slow adoptor compared to FinTech, EduTech etc	Most people can understand the need to recycle and share data. Its all about circular and sharing economies
10	Go public as soon as an alliance is created	Public support is crucial for the food RI agenda	Universities and research might in addition benefit from strengthened industry relations
