

WELCOME

The Post-WWII International Sciences meeting is a space to discuss the contributions to a book exploring the diverse and complex sets of relations that become visible in the production of knowledge in the educational sciences in the post war years in diverse spaces in Europe, North and South America, and Asia. It considers how social and educational sciences become actors, construing and construction principles about the relation of society and individuality and how their epistemic residues and the formation of institutional structures are important to understanding contemporary research. The exploration is, in relation to the history of science, about the education agora—the spaces of interchange between science systems and scientific knowledge production in the Science-Society relations. This will entail four dimensions of the sciences that become visible.
