If you believe that this document breaches copyright please contact us at [vbn@aub.aau.dk](mailto:vbn@aub.aau.dk) providing details, and we will remove access to the work immediately and investigate your claim.

# Understand Your Fingerprint in Pure

## THE VBN-TEAM RECOMMENDS

The Fingerprint functionality is a software system of Natural Language Processing (NLP) techniques to extract information from unstructured text. Applying domain-relevant thesauri to scientific publications, the fingerprint engine creates an index of weighted terms, called concepts, which defines the text, known as a Fingerprint. By comparing Fingerprints, users can look beyond metadata and expose valuable connections among you and other researchers, publications, funding opportunities and ideas.

The engine uses English language texts in publication titles, abstracts, keywords and profile texts for researchers and organizations.

1. **Recommendation:** Make sure that you add English translations for your texts in Pure: titles, abstracts, profile texts and keywords.
2. **Configuration:** Single concepts can be suppressed if they are not relevant for a key description of your research area. You can switch of the Fingerprint for your profile in the VBN-portal, if you find that it is not apt.
